

The background of the entire poster is a photograph of a complex industrial system featuring numerous large, metallic pipes and valves. Overlaid on this photograph is a technical line drawing of a pipe section, showing various dimensions and labels such as 'aDF 3463', '102.34', '119', '100.7', '100.26', and '227.78'.

4INSULATION

industrial safety, security and energy efficiency

4INSULATION expo is the meetings platform for manufacturers of supplies and materials, as well as scaffolding producers and constructors. The expo welcomes architects, representatives of the health and safety and fire protection sector and installers. The first edition was held in 2019. The event attracted the most important industrial companies and many visitors, including installers, investors, architects, and decision-makers from companies operating in the energy, chemical and petrochemical industries.

4INSULATION is the only trade fair in Poland dedicated to the industrial insulations sector. The event is, therefore the best way to establish business contacts with representatives of Polish and foreign companies.

4INSULATION is the best place to present the latest technologies for industrial insulation: cutting-edge products and innovative materials which have ecological DNA.

MABI is a Swiss manufacturer of sheet metal processing machines specialising in insulation technology. The company finds the expo hugely important. This is where we can present our innovations, showcase them to a specialised audience. The new and money and energy saving MABI 3000E EVO lines for pipes production as well as the MABI 12-2 Vario and MABI 16-3 Vario are presented at the expo. Markus Biland, MABI

- We should not forget about large-scale constructions, the so-called HAVAC installations used for heat or cold removal as well as air conditioning aspects - emphasises **Paweł Gajewski**, responsible for the substantive preparation of the exhibition. That is why the 4INSULATION expo continues the previous topics; the industrial insulations complemented with entirely new developments in insulation - the renewable energy sources. The expo target group - installers and design companies which prosper for new materials, the best insulation properties. 4INSULATION also welcomes production companies - insulation materials and assembly tools manufacturers. The expo is targeted at insulation instigators, too. Companies that supply machines for insulation prefabrication account for a large share of the expo participants. The industry sector dealing with auxiliary materials, i.e. tools and elements for fixing insulation structures, also marks its expo presence.

Schwartmanns finds Poland a crucial market; that's the main reason of our participate in the 4Insulation show.

4Insulation is the only platform truly and solely dedicated to industrial insulation. Moreover, the organisational team is really professional!

Visitors to the expo come from the local (Polish) and foreign markets (the last time we had excellent contact with customers from Norway)!

Schwartmanns is a world-renowned brand that offers high-quality machines for sheet metalworking. Schwartmanns focuses on industrial insulations; the company is the market leader in this segment in Poland.

Schwartmanns boasts its latest achievements - an innovative laser cutting machine for sheet-metal coil-working as well as a new digital measurement solution to be mounted on the job site, in addition to the new solutions rolling machines.

Thomas Pitsch, Schwartmanns

The Heat not Lost Conference

HEAT NOT LOST is one of the highlights of the **4INSULATION** expo. Every year, the **Polih's Organisation for Energy Efficiency and Research** holds the event which welcomes industry specialists from around the world. **HEAT NOT LOST** is an excellent opportunity to learn about the latest solutions as well as industry scientific reports.

The previous meeting was in February 2020 and was held under the banner of cogeneration. The conference was divided into three panels. The first panel was devoted to gas. The second panel focused on discussion on biomass cogeneration, new possibilities offered by oscillating furnaces in RDF waste energy generation and installation and the benefits provided by hybrid cogeneration plants powered by micronised biomass.

The last part focused on electricity and included the issues related to electricity and heat cogeneration, the current support system for electricity generation in high-efficiency cogeneration installations.

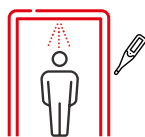

Expos safe and sound - - we can do it

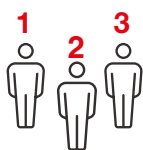

Safety is of utmost importance today. Extensive exhibition space, extra space between expo stands, meeting areas with special dividers, cutting-edge disinfecting stations make Targi Kielce meetings safe.
