11:00 - 12:00	Congress Center Kappa room	Hydrogen Battlefield Revolution 2035 – Powering the Future of Military Platforms. Part I Organizer: PHU Lechmar Sp. z o.o. ENERGY AS OPERATIONAL CAPABILITY Distinguished experts Żaneta Kłosowska and Gen. Grzegorz Grodzki will introduce participants to the world of hydrogen and synthetic fuels, presenting their potential as a power source for future military platforms. The modern battlefield generates unprecedented energy demands - weapon systems, sensors, unmanned platforms, and digital communications all require uninterrupted power supply. Energy is no longer merely a logistical resource; it has become a decisive factor in the pace and effectiveness of operations. Traditional, centralized fuel supply chains are increasingly vulnerable to disruption -fuel convoys remain one of the weakest points in military logistics. The response lies in distributed and resilient power systems that reduce dependence on single, easily targeted sources. The experience of the war in Ukraine confirms this direction: energy autonomy at the unit level and the ability to rapidly restore power capabilities after infrastructure loss have proven critical. Energy thus emerges not only as a matter of supply, but as a genuine element of operational advantage, mobility, and unit survivability. Free admission for MSPO participants

13:00 - 14:30	hall 5, room 501	Press debate: Resilient Infrastructure, Resilient State: How to Protect Key Services and Connectivity? Organizer: Ringier Axel Springer Polska National security depends not only on military capabilities but also on the operational continuity of the infrastructure underpinning the military, public administration, the energy sector, transport, emergency services, and the daily lives of citizens. Cyberattacks, sabotage, system failures, and disinformation campaigns can disrupt the functioning of multiple sectors simultaneously. Connectivity plays a pivotal role in this system; without it, coordinating services, controlling critical systems, and communicating effectively with citizens would be impossible. The discussion will focus on how the state and private operators can jointly strengthen critical infrastructure resilience, develop dual-use solutions, and ensure the continuity of essential services during a crisis. Connectivity is a cross-cutting prerequisite for the functioning of other critical infrastructure components. Admission by invitation for MSPO participants

14:00 - 16:00	Congress Center, Kappa room	Hydrogen Battlefield Revolution 2035 – Powering the Future of Military Platforms - PART II Organizer: PHU Lechmar Sp. z o.o. TECHNOLOGIES AND FUELS OF THE FUTURE. FROM TECHNOLOGY TO MILITARY CAPABILITIES The second part of the conference will take the form of an in-depth discussion, during which the experts - Żaneta Kłosowska and Gen. Grzegorz Grodzki - will present substantive conclusions drawn from PHU Lechmar's knowledge and experience regarding the application of hydrogen by the European Union, NATO, and Ukraine. Hydrogen will be presented as part of a broader, multi-fuel defence ecosystem, also encompassing ammonia, e-methanol, and SAF. The discussion will address how different energy carriers align with various platforms, transport types, and operational scenarios. Central to the discussion will be the concept of the Multi-Fuel Defence Energy Hub, integrating the production, storage, and distribution of energy and fuels for bases, ports, airfields, and logistics support infrastructure. Both the potential operational benefits of new fuels and the limitations related to their safety, transport, and infrastructure requirements will be presented. The discussion will then turn to the practical transition from demonstration solutions to real operational capabilities. This includes assessing technology readiness, proposing pilot programmes, and outlining an implementation roadmap for a multi-fuel energy system through 2035. Technologies will be evaluated in terms of reliability, safety, NATO interoperability, and the ability to be serviced and repaired under field conditions. The session will conclude with a proposal for specific demonstrators. Free admission for MSPO participants
