Our Mission

Mine Colours produces concentrated Masterbatch – additive product and services in international quality standards to provide value for achievements of our customer. To provide convenient price, quality solutions to our Masterbatch manufacturer company which play an important role in country development and to progress with the principle “Life begins with colours” as a company which cares for environment and human health.

Our Vision

Mine Plastics Co. which sets out with the idea of being the solution partner of plastic manufacturers, which adopts the principles of quality, trust and unconditioned customer satisfaction, which privileges the understanding of convenient price, after sale support with favor and warm friendship aims at becoming one of the leader institutions of the sector with Masterbatches dye and additives produced in up-to date and modern machines.

Colour Masterbatch

One of the most important values in the Masterbatch production the guarantee of quality. Each and every Masterbatch and plastic additive producer should a stable degree of quality. The reflection of indicated believe in Mine Colours is the overwhelming importance on the consistency and the quality.

Generally, our colour Masterbatches used in 2 % in many appliances.

Nevertheless, other raw materials might have specific requirements on the active colourant.

Black Masterbatch

Mostly, the quality of the used Carbon Black colourant determines the overall quality of the black Masterbatch. Black Masterbatches' should have consistent dispersion and concentration.

Mine Colours can change its base formulations upon requests regarding the product's blackness and brightness.
