IN LARGE ALUMINIUM  
MOULDS AND TOOLS**

# SELF GROUP

## OUR MISSION

---

Self Group develops, applies and shares knowledge. We strongly believe in the value and culture of relationships: the exchange of ideas and competencies, as well as intense cooperation between work teams, collaborators, partners and clients.

### ***Culture of sensitivity***

Throughout the course of our history we have inherited and cultivated a unique sensitivity in our overall approach and dialogue with clients, taking into account individual needs in order to create a winning combination.

### ***Team culture***

Ours is a young, dynamic, and compact team founded upon the values of respect and trust. Solid competencies help us exceed the highest standards through innovation and research. This idea extends to external teams, where common languages create dynamic relationships with the best manufacturers, designers, architects, as well as University engineering departments and research facilities throughout the world.

***Culture of continuous*** Improvement every day we consolidate knowledge and experience through our work. We experiment with the most innovative work processes, research the best materials and strive to make our organizational systems more and more dependable: intuition and passion both guide and stimulate us to develop individual and group know-how.

## PROCESS IS EVERYTHING

---

**Flexibility** in activating processes, promptness in coordinating and response readiness. Plug and play philosophy is at the root of everything we do. Our precise goal is to **offer the best products by reducing time and costs**. The key to our success is a process of vertical integration harmonizing with our network of human resources. Technology and services come into play at every level: from development to post sale.

On our part, the starting point is understanding customer specifications. **The challenge is to go even further, to understand real needs and requirements.** Our team is prepared to listen and gather information, ideas and projects. Our network consists of people and relationships ready to assist our customers in maximizing personalization through design and co-design of their product, material selection, virtual modelling and process simulations.

## WE ARE OUR PRODUCT

---

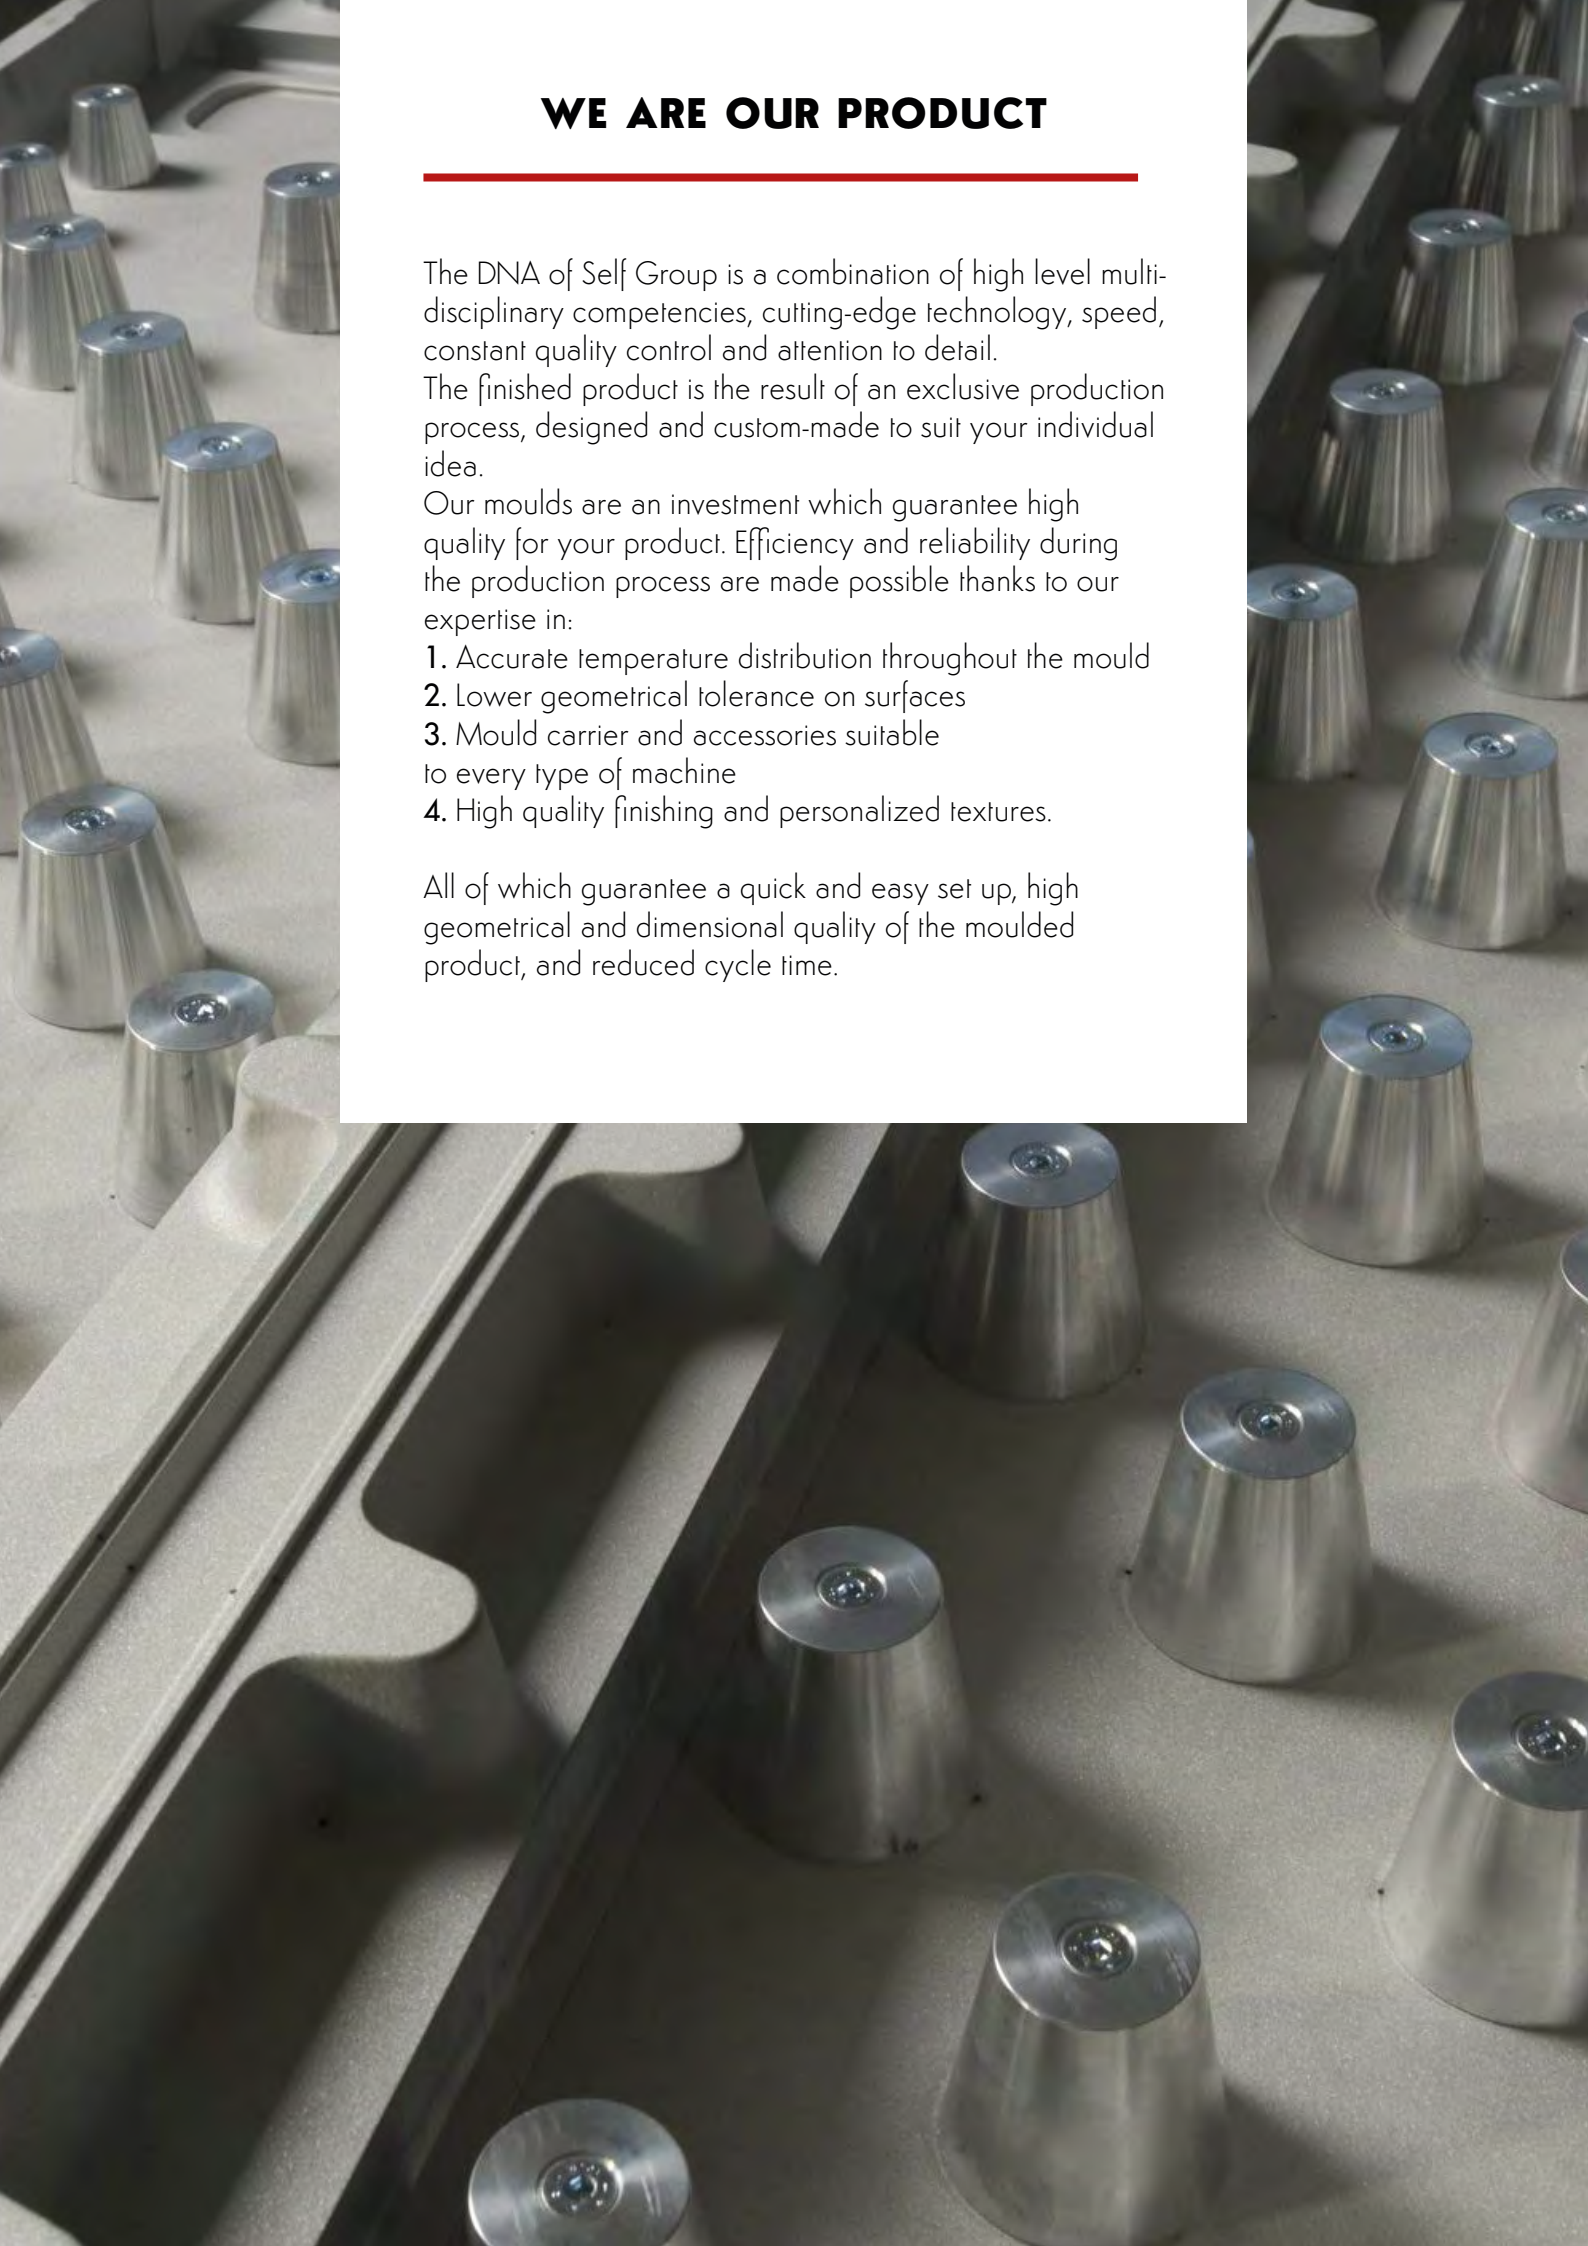

The DNA of Self Group is a combination of high level multi-disciplinary competencies, cutting-edge technology, speed, constant quality control and attention to detail.

The finished product is the result of an exclusive production process, designed and custom-made to suit your individual idea.

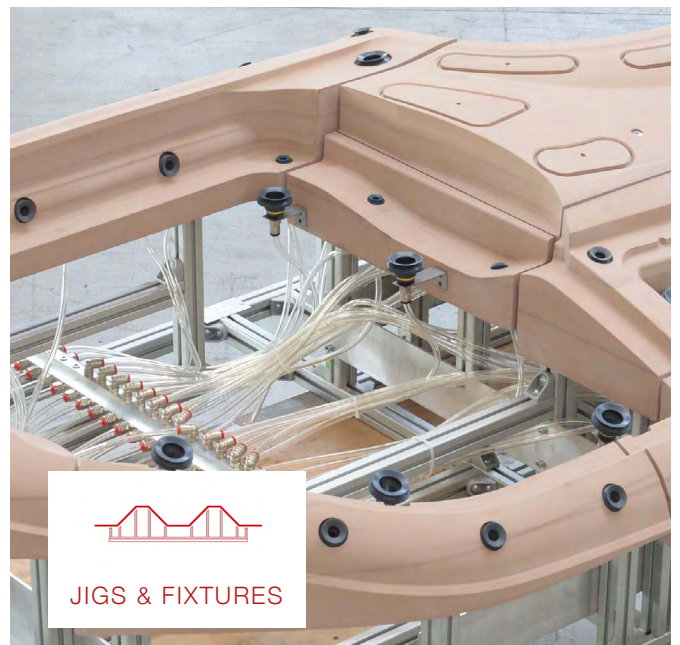

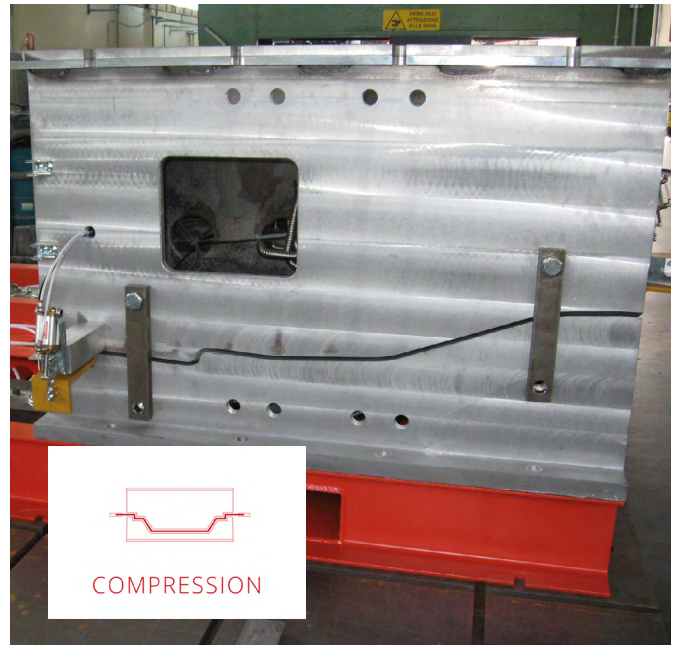

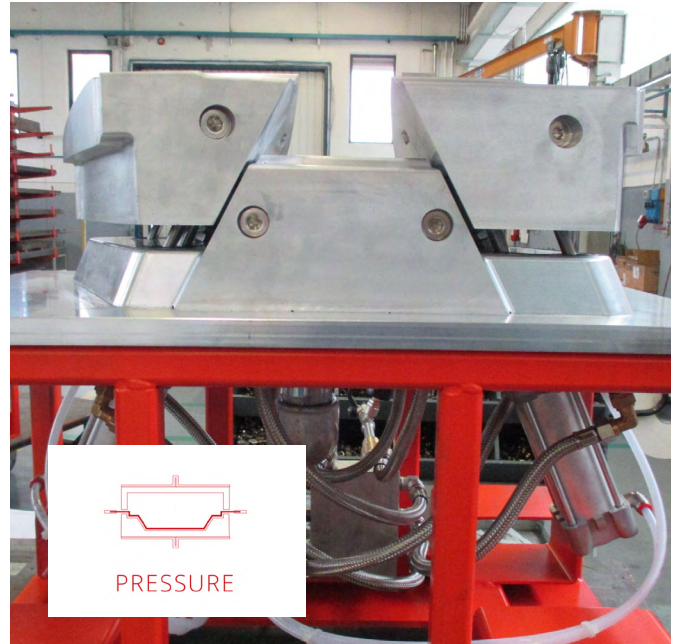

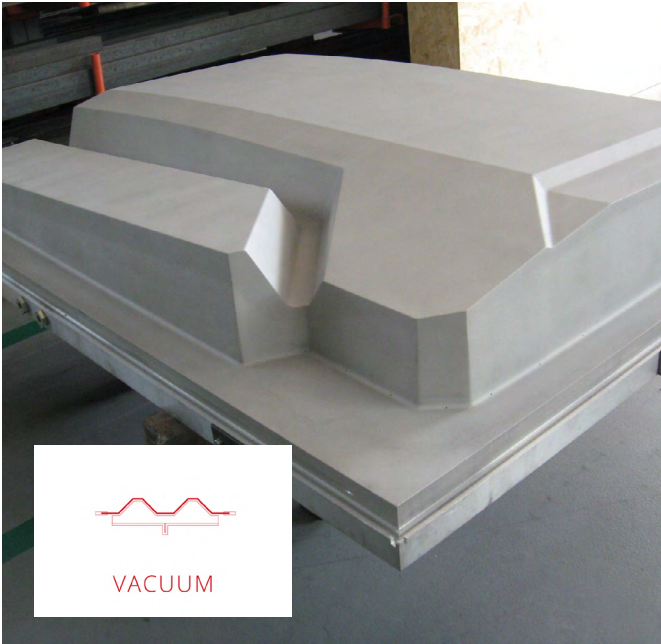

Our moulds are an investment which guarantee high quality for your product. Efficiency and reliability during the production process are made possible thanks to our expertise in:

1. Accurate temperature distribution throughout the mould
2. Lower geometrical tolerance on surfaces
3. Mould carrier and accessories suitable to every type of machine
4. High quality finishing and personalized textures.

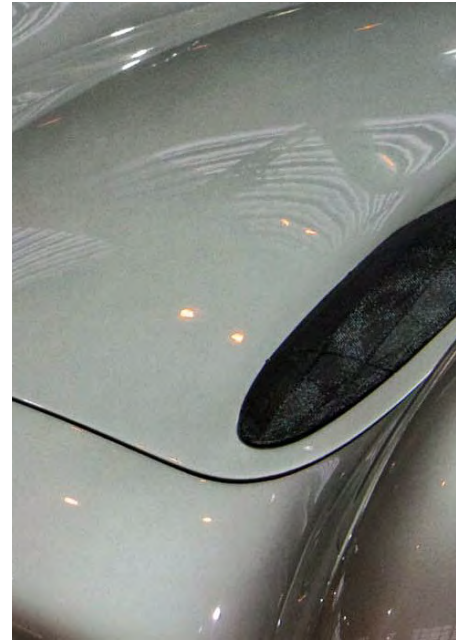

All of which guarantee a quick and easy set up, high geometrical and dimensional quality of the moulded product, and reduced cycle time.

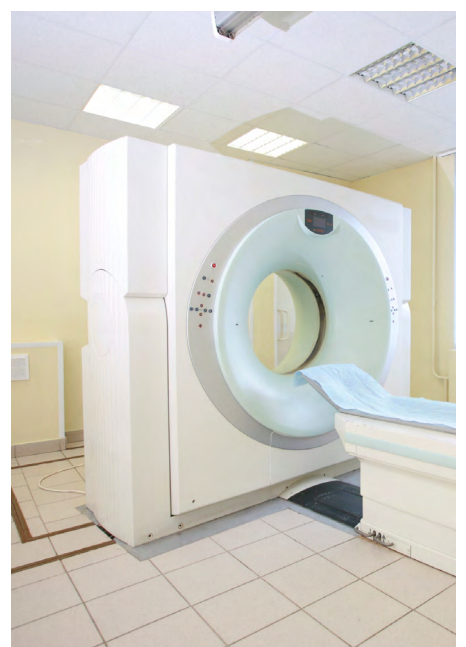

## APPLICATIONS

---

- Agriculture
- Aircraft
- Architecture
- Automotive
- Bathroomware
- Construction equipment
- Furniture
- Healthcare
- Industrial packaging
- Railway
- Renewable energy
- Yachting

# SELF GROUP

## OUR PLANT

---

Our building includes an area for modelling, a mechanical workshop, laboratories, offices and everything concerning logistics. We are strategically located and easily accessible to our customers. **Self Group** is also the nerve center of collaborative relationships with the research facilities and universities of northern Italy.

We designed our facility according to the most advanced ergonomic models, paying maximum attention to the surrounding environment. This is how we work: in perfect harmony with manufacturing, territory and community.
