FOR IMMEDIATE RELEASE

***NVTS Night Vision Technology Solutions* adapts US Army AN/VAS-5B(V) thermal camera configurations to fit International Tanks**

North Kingstown, RI USA – NVTS Night Vision Technology Solutions is adapting the US Army’s periscope-style DVE thermal cameras (Driver’s Vision Enhancer), to seamlessly fit international tanks as well.

NVTS’s expertise in merging military-hardened US Army AN/VAS-5B(V) configurations with international tanks, assures compatibility and optimal performance for our allied nations. Thermal DVE cameras allow tank operators to see through darkness, smoke and adverse weather conditions. The NVTS AN/VAS-5B(V) cameras provide a crucial advantage during nighttime operations, enhancing situational awareness and reducing risk of navigational errors.

Equipment cross-pollination augments joint military operations, highlighting the importance of collaboration and industry partnerships in advancing global security in an ever-changing geopolitical landscape.

NVTS Night Vision Technology Solutions is a Service-Disabled Veteran-Owned Small Business providing EO/IR camera systems for maritime, border patrol and armored vehicle applications.
