

SeaEagle Digital Electro Optical Surveillance System (EOSS)

Next generation electro-optical surveillance capability

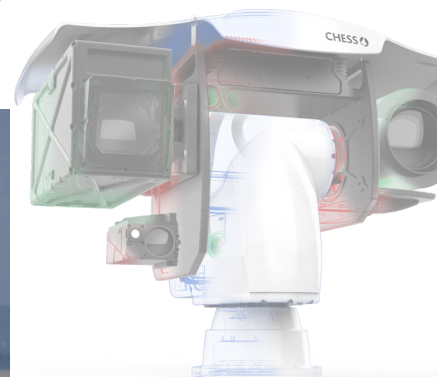

Designed to offer greater flexibility by providing operators with the opportunity to integrate the system with a wider range of additional sensors

Key Features:

- Fully digital architecture
- Advanced sensors available
- Integrated processing
- Additional sensor integration
- Module replacement on platform
- Stabilised via gyro and E-stab
- Reduced operator and training burden
- Full service installation and support

The digital EOSS enables greater flexibility by providing operators with the opportunity to integrate the system with a wider range of additional sensors on the host. Its digital architecture is configured for modular sensors which ensures the highest levels of operational availability, while also providing end users with options to reconfigure and customise the system to meet a variety of mission profiles, ultimately offering a greater range of sensing capability.
