

Antoon Plus

**Safety**  
in every point!

ADAC certified

# So, what is ADAC?

ADAC - Allgemeiner Deutscher Automobil-Club is a German independent research institute, one of the largest organizations in Europe, testing car seats for safety. The independence of the research is proven by the fact that it is ADAC, together with its partners, that selects the car seat models to be tested. The choice depends on the popularity of a particular product on the German market. An additional factor influencing the selection is product's innovation. Car seats of various weight and height ranges are tested in ADAC safety tests.

RWF – reward-  
-facing instalation  
up to 105 cm/18 kg

Side Impact Protection  
– additional side  
reinforcement system

Easy 360°  
rotation base

Meets the highest  
i-Size safety standards

# What are the assessment criteria?

The selected car seat goes through 4 stages of tests, because each parameter is checked in a different, independent research center. ÖAMT from Austria monitors ease of operation, TCS from Switzerland - test ergonomics, Stiftung Warentest from Germany checks the car seats for chemical substances and ADAC verifies safety. The results are published twice a year.

**The Lionelo Antoon Plus car seat scored 2,9 in the final grade. 2,2 in safety, 3,3 in operation, 1,8 in ergonomics, 1,0 in chemical substances presence.**
