

# Where innovation meets defence

We are shaping the future of defence, security and protection. We deliver advanced technology, high-quality components, and critical security solutions to demanding customers. Each company within the group is a leading company in its specific niche and each represents expertise in their field.

## Where Expertise Becomes Capability

Our operations cover areas such as composites, precision engineering, electromagnetic warfare, survival equipment, extreme testing, and infrastructure protection.

Together, we support our customers with cutting-edge technology and trusted reliability, primarily serving the defense, industry, and public safety sectors across Sweden, Europe, and NATO countries.

## Technology Verticals

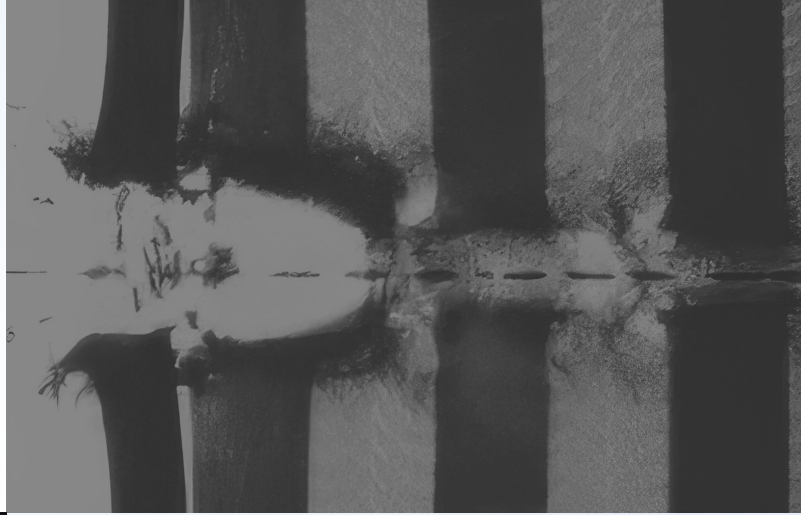

Our expertise spans multiple technology verticals, continuously evolving through new acquisitions and partnerships. Among our core areas are:

- Advanced composites
- Precision etching, laser cutting & welding
- Electromagnetic warfare systems
- Military batteries for low temperatures
- Silent autonomous underwater vehicles
- High-speed X-ray testing for extreme environments
- Technical sewing and survival equipment
- Infrastructure protection for critical assets.

# We can design, produce and deliver your idea in shorter time, and in own facilities, in Europe

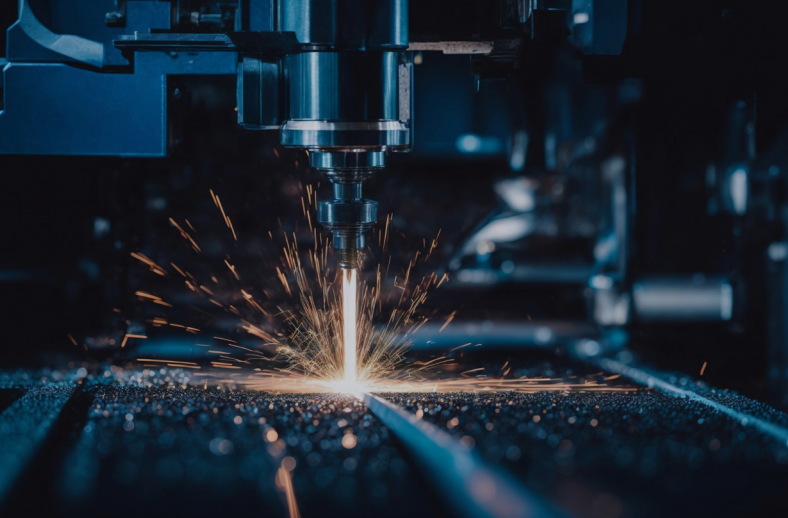

## **Astor Tech — System solutions for modern defense**

Astor Tech is the Group's technology hub, delivering advanced system solutions in electromagnetic warfare, high-speed X-ray systems for hypersonic testing, and (through collaborations) stealth technologies and unmanned systems. Customers include NATO forces, defense industry companies, government security agencies, and research institutes. The operations emphasize integrated system platforms as well as training and testing solutions.

## **Astor Industry — Components and composites for demanding environments**

Astor Industry forms the industrial foundation of the Group. We deliver advanced components, materials, and subsystems with high precision and reliability. The business area covers composite production, micrometal components, sheet metal etching and processing, and precision engineering – serving defense, space, aviation, marine systems, vehicles, energy, and advanced engineering. The focus lies on both contract manufacturing and customized solutions for critical applications.

## **Astor Protect — Advanced protection and survival systems**

Astor Protect is the Group's platform for personal protective equipment, tactical systems, survival solutions, and ammunition. Created to meet the growing need for integrated, technologically advanced protection, this business area develops solutions that span from offensive to reactive protection in high-risk environments. Customers include NATO armed forces, special forces, rescue services, civil authorities, and industrial operators.
