

Bausano extruder series

MD series

Parallel twin-screw extruders

Precision-engineered extrusion lines combining advanced screw geometry, patented transmission systems and smart energy monitoring to maximise productivity, efficiency and long-term operational reliability.

E-ON series

Conical twin screw extruders

Engineered for PVC-U corrugated pipes and rigid profiles, delivering high precision, process stability and energy efficiency in demanding production environments.

E-GO series

Single-screw extruders

Powerful and compact single-screw extruders designed to process a wide range of polymers, ensuring high output and efficient torque transmission even at lower processing temperatures.

E-Go R for recycling

Single-screw extruders

Single-screw extruders dedicated to recycling and pelletizing plastic waste, equipped to handle contaminated materials and deliver high-quality granules for multiple downstream applications.
