

GLOBAL SOURCING

Astute's global sourcing specialists operate through an international network of procurement hubs and authorised supply channels, delivering fully traceable components to support your production requirements wherever they are needed.

SUPPLY CHAIN MANAGEMENT

At the forefront of supply-chain innovation, Astute Electronics consistently delivers solutions with exceptional care and customer service.

Our authorised distribution strategies, backed by leadership in the sector, make us the partner of choice for high-reliability industries.

Our global footprint, underpinned by our team of accredited experts, ensures businesses remain robust and responsive.

INTELLIGENT MARKETPLACE

Astute Intelligent Marketplace (AIM) offers real-time visibility into global component inventories by integrating more than 40 API links to authorised distributors and manufacturers direct.

This system enables users to locate stock before it becomes publicly available, providing a significant competitive advantage in identifying hard-to-find or critical parts.

More than just a parts-locator tool, AIM delivers strategic market intelligence. It offers access to detailed data on pricing, lead-time trends, incoming inventory flows and regional stock positions—all curated to help materials, finance and supply-chain professionals make better decisions and optimise asset utilisation.

EXCESS SOLUTIONS

Our Excess Solutions team helps organisations turn redundant or surplus components into tangible value. Using Astute Intelligent Marketplace (AIM), we provide transparent, data-driven insights into market conditions: timing of peak demand, pricing trends, global broker activity and regional stock movements.

Astute offers a full lifecycle approach to excess stock. You can upload your excess list (BOM) via a secure portal for review and analysis.
