

COMPANY PRESENTATION

NEW STANDARD

Over Two Decades of Excellence in Metal Processing.

OUR PROPOSAL FOR COLLABORATION

Initial Consultation and Project Planning

Our technical specialists will visit your site to discuss your order, take measurements, create drawings, and develop technical documentation. We'll approve the terms of reference, ensuring all requirements align with your expectations.

Production and Quality Assurance

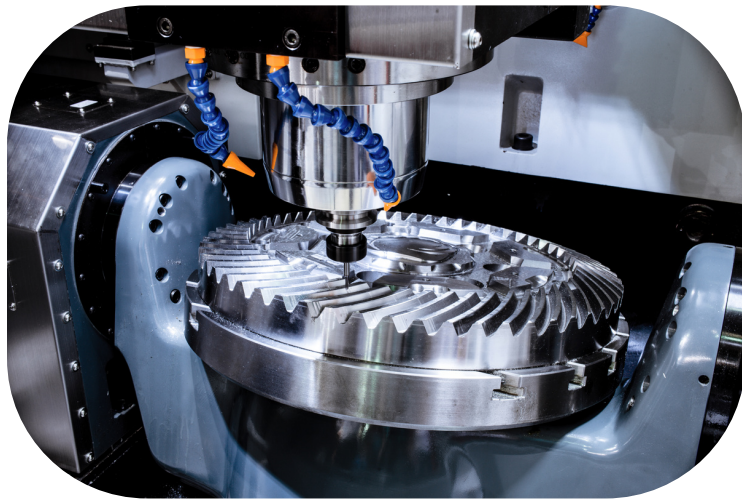

After approval, we launch production—procuring materials, manufacturing parts, and conducting strict quality checks to meet high standards and your specifications.

Delivery and Ongoing Technical Support

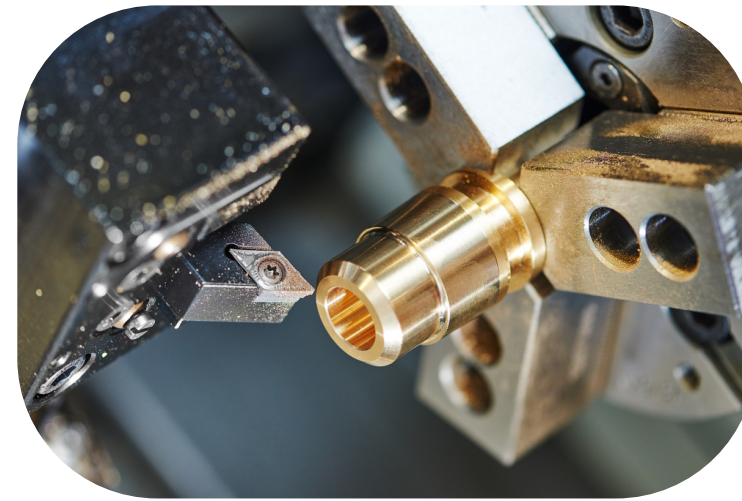

We manage timely delivery, ensuring products arrive in perfect condition. Our team provides ongoing technical support, from consultations to warranty services, for a reliable partnership.

OUR SERVICE

Milling

Precision machining process using rotating cutting tools to shape metal or other materials into complex parts with high accuracy and smooth finishes.

Turning

Machining technique where a workpiece rotates against a cutting tool to produce cylindrical components, ensuring tight tolerances and excellent surface quality.

EDM (Electrical Discharge Machining)

Advanced method using electrical sparks to erode material, ideal for creating intricate shapes in hard metals with exceptional precision.

Other services

- GEAR HOBGING
- RUBBER COATING OF SHAFTS
- POLYURETHANE COATING
- WELDING
- CHROME PLATING
- HEAT TREATMENT
- SURFACE POLISHING

INDUSTRIES WE SERVED

Our advanced equipment and specialized gear hobbing machines allow us to collaborate with a diverse array of industries, providing precision components customized to their specific needs.

We proudly work alongside sectors such as Aerospace, Automotive, Defense, Electronics, Energy, Medical, Construction, Machine Building, Robotics, Steel, and Metals, ensuring high-quality solutions for every project.
