Clavister provides military-grade cybersecurity designed and developed in Sweden, built to protect defence platforms, tactical networks and mission critical operations across Europe against evolving cyberthreats.

Tactical IT systems are expanding as digitalisation increases, introducing new types of vulnerabilities. Clavister's solutions strengthens the cybersecurity of tactical communication, battle management systems, sensors and other mission-critical technologies. It provides advanced firewalling, encrypted communication (VPN) and AI-powered intrusion detection to protect systems from external threats and reduce risk through controlled and segmented communication.

Element is a global leader in Testing, Inspection, and Certification, supporting safety-critical industries, notably aerospace and defence. We help customers ensure the safety, reliability and performance of products, materials and processes where failure is not an option. Combining more than 22,000 physical testing methods with our advanced digital modelling and simulation capability, Element delivers independent verification and validation services across the full product lifecycle; from early-stage R&D and qualification through production, in-service maintenance and upgrade.

With a global network of more than 275 laboratories and over 9,000 employees, including extensive operations across the EU and UK, Element's scientists, engineers, and technologists support customers in meeting stringent regulatory, quality, and operational requirements. Our expertise include materials technology, environmental and mechanical testing, metrology and calibration services, full system EMC/EMI testing and human environment testing.

markus.nowacki@habia.com

Habia, leading provider of high-performance cables and harness systems solutions designed to withstand extreme conditions from high-temperature environments to robust solutions for naval, aerospace and land-based platforms, is a trusted partner to the defence industry. Our mission is to provide tailored solutions that meet the evolving demands of modern defence technology offering increased durability, reduced weight and optimized performance. The cables and cable systems are approved to meet the toughest defence specifications in the world and the highest security and quality standards, ensuring reliability in the most demanding applications.

Habia provides high manufacturing flexibility from customized low- to high-volume production. Our capabilities ensure your latest customer modified designs are considered.

Habia is a global leader in designing and manufacturing high-performance cables and connectivity solutions for industries including defence, marine, aerospace and industrial applications. With decades of experience, Habia delivers innovative, custom-engineered cable systems that ensure maximum reliability and performance.

Stefan Barbunopulos,
Vice President

+46 727 290 912
stefan@recas.se

Recas is a Swedish engineering and industrialisation partner supporting the development, production and lifecycle management of advanced technical systems. With capabilities across engineering services, in-house product development, PLM, testing and production support, Recas helps customers move from concept to operational capability with speed, traceability and industrial scalability.

For the Swedish Pavilion at MSPO, Recas presents its role in strengthening Nordic and European defence resilience through flexible production capacity, supplier coordination and rapid industrial ramp-up. A key example is RUFUS – Recas Unmanned Field Utility System, a modular unmanned ground vehicle platform designed for demanding civil and military operations. RUFUS is built as an open and adaptable UGV platform, enabling fast integration of new capabilities while supporting scalable production, maintainability and field repair.

Recas combines practical engineering, PLM-driven configuration control and a strong industrial network to support defence customers with robust, adaptable and production-ready solutions. The company's focus is to contribute to resilient supply chains, operational readiness and increased European defence capacity.

Sectra Communications

More than ever, military and defense organizations depend on robust secure communication systems to share classified information confidently and efficiently.

At Sectra, we make it our priority to ensure your secure information exchange and mitigate the risk of unauthorized access.

Our proven and certified products, including the Sectra Tiger/S and the Sectra NetEncryptor, enable defense organizations to protect confidential information, prevent eavesdropping and communicate securely—up to and including the TOP SECRET classification level.

For nearly 50 years, Sectra has been providing defense organizations in Europe and NATO with trustworthy, secure communication solutions and future-proof mobile devices that are designed, developed and produced in Europe.

We are proud to play a vital role in keeping your most critical information secure, thereby contributing to a safer and more stable society.

Classified communication. Secured.

Systecon is the global leader in analysis-driven Life Cycle Management LCM. The Opus Suite software platform empowers defense operators and industry suppliers to make informed, data-driven decisions across all phases of the system life cycle, from concept and development to procurement, operations and sustainment.

Building on an unrivaled legacy in life cycle management, Opus Suite combines advanced modeling, simulation, optimization and life cycle cost analysis to enable users to design robust systems and support solutions that maximize mission readiness, adaptability and operational performance while minimizing total cost of ownership. Opus Suite+ brings these capabilities together in a unified, modern platform, representing the latest evolution of Opus Suite, enhancing the user experience and enabling more efficient, consistent analysis across the system life cycle.

Trusted in over 20 countries and by the majority of NATO defense forces, Opus Suite is used by defense organizations, government agencies and prime contractors in some of the world's most advanced and complex programs, including GCAP, F35, Gripen, Typhoon, A400M, C-390, FA-50, Type 26 frigates, Leopard 2 and CV90 across air, land and naval domains.

Stockholm Business Region

Stockholm Business Region is the official investment promotion and destination agency for the City of Stockholm. Its mission is to strengthen the city's global position as an attractive, sustainable and competitive place for companies, talent and visitors. Acting on behalf of the 54 municipalities within the Stockholm Business Alliance, we represent more than two million inhabitants and 45 percent of Sweden's GDP.

We provide free, confidential, and tailor-made establishment services for international companies and investors looking to enter or expand in Sweden's capital region. These services include market insights, sector analyses and introductions to business partners, potential customers and relevant authorities. We help to identify office or industrial sites, facilitate recruitment and relocation support and connect investors to the region's innovation ecosystem of clusters, incubators and research institutions.

The aim of Business Sweden (The Swedish Trade & Invest Council) is to strengthen and promote Sweden as an attractive, innovative and competitive business partner.

Jointly owned by the Swedish state and the Swedish business sector, Business Sweden helps international companies gain access to the Swedish market and helps domestic ones utilise it as a platform for expansion. The shared ownership provides access to contacts and networks at all levels. Professional services, strategic advice, practical support, market insights are offered.

We have a strong presence in every region in Sweden and in 40 countries worldwide to promote the expertise of Swedish companies seeking internationalization and the brand “Made in Sweden”.
