International Tactical Training Centre
Redefining the Training Pipeline

ITTC
CANADA 

The International Tactical Training Centre (ITTC) provides advanced fighter, weapons, and tactical training for air forces seeking to enhance combat capability and operational readiness.

ITTC offers a holistic tactical training environment spanning lead-in fighter development, tactical employment, electronic warfare, weapons delivery, complex mission planning, and instructor-level development. Courses are delivered by former operational fighter pilots and weapons instructors from NATO and allied air forces. Training combines live-flying operations, high-fidelity simulation, and a contemporary tactical curriculum aligned with evolving threats and mission requirements. ITTC programmes are designed to develop tactical leadership, strengthen operational proficiency, and support long-term fighter force development.

Training Capabilities:

- **Fighter & Tactical Training:** Lead-in fighter, advanced tactics, electronic warfare, multi-ship operations, weapons employment, and instructor-level training.
- **Integrated National Solutions:** Bespoke training pipelines aligned with each customer's doctrine, aircraft, and capability development objectives.
- **Uncrewed Systems Tactical Training:** Emerging modules supported by the Manned Remotely Piloted Aircraft (MRPA) with capabilities comparable to a Medium Altitude Long Endurance UAS. This tool includes a sophisticated Intelligence, Surveillance and Reconnaissance (ISR) package.

This breadth enables customers to consolidate multiple specialist training requirements under a single provider, ensuring consistency, safety, and seamless progression across roles and qualifications.

Global Impact:

For over twenty years, ITTC have trained personnel from more than twenty-five nations. Graduates serve in key positions across defence centres, aerospace companies, government agencies, and operational squadrons. Their contributions support capability development, programme oversight, safety assurance, and continual advancement in defence aviation.

Instructional Expertise:

ITTC is equipped with veteran fighter pilots and weapons instructors from NATO and allied air forces. Our team holds a multitude of aerospace specialists with extensive proficiency in leadership, experience, execution and evaluation programmes. This collective expertise ensures that all instruction is aligned with modern doctrine, regulatory standards, and industry best practice.

Facilities, Fleet and Training Ecosystem:

- A dedicated fleet of modified L-39 jet trainer aircraft incorporating Heads-Up Display (HUD), touch-screen displays, Eye-tracking software and Embedded Tactical Training System (ETTS)
- Advanced Aircraft Simulation Centre (AASC) supporting tactical training, mission rehearsal, and systems evaluation with mission theatre and mission command centre
- Modern academic facilities, briefing rooms, and mission planning spaces
- Engineering, maintenance, and operations support enabling a high frequency of training

This integrated ecosystem ensures realistic operational training and allows students to transition smoothly between academic, synthetic, and airborne phases.

Commitment to Quality and Safety:

Quality, safety, and continuous improvement are central to ITTC operations. Training programmes are regularly reviewed and refined to align with evolving operational needs, regulatory developments, and emerging aerospace technologies.
